Site Energy and Sustainability Review 2025

Group EHS

1. Introduction

This review summarises energy-saving projects and emissions at each manufacturing site. Absolute consumption figures are reported in the Annual Operations Report; this document reports savings and renewable capacity only.

2. Tampere Works (Finland)

Tampere Works reduced its energy consumption by 2,600 MWh (7.1%) compared with FY2024, mainly through compressed-air leak repairs.

Rooftop solar capacity at Tampere Works reached 570 kWp. Scope 2 emissions for the site were 5,890 tonnes CO2e.

The energy manager responsible for Tampere Works is Sofia Etxeberria.

3. Gdansk Assembly (Poland)

Gdansk Assembly reduced its energy consumption by 2,050 MWh (8.7%) compared with FY2024, mainly through LED lighting retrofits.

Rooftop solar capacity at Gdansk Assembly reached 890 kWp. Scope 2 emissions for the site were 5,790 tonnes CO2e.

The energy manager responsible for Gdansk Assembly is Freja Laine.

4. Porto Foundry (Portugal)

Porto Foundry reduced its energy consumption by 1,330 MWh (12.6%) compared with FY2024, mainly through process cooling optimisation.

Rooftop solar capacity at Porto Foundry reached 1,130 kWp. Scope 2 emissions for the site were 8,740 tonnes CO2e.

The energy manager responsible for Porto Foundry is Nadia Mendes.

5. Brno Machining (Czechia)

Brno Machining reduced its energy consumption by 2,980 MWh (4.5%) compared with FY2024, mainly through weekend shutdown discipline.

Rooftop solar capacity at Brno Machining reached 770 kWp. Scope 2 emissions for the site were 7,820 tonnes CO2e.

The energy manager responsible for Brno Machining is Aleksi Kowalski.

6. Lyon Systems (France)

Lyon Systems reduced its energy consumption by 2,850 MWh (5.3%) compared with FY2024, mainly through variable-speed drives on fans.

Rooftop solar capacity at Lyon Systems reached 1,000 kWp. Scope 2 emissions for the site were 3,470 tonnes CO2e.

The energy manager responsible for Lyon Systems is Zofia Salo.

7. Bilbao Plant (Spain)

Bilbao Plant reduced its energy consumption by 1,405 MWh (3.1%) compared with FY2024, mainly through a new building management system.

Rooftop solar capacity at Bilbao Plant reached 710 kWp. Scope 2 emissions for the site were 8,770 tonnes CO2e.

The energy manager responsible for Bilbao Plant is Otto Girard.

8. Graz Electronics (Austria)

Graz Electronics reduced its energy consumption by 2,580 MWh (7.2%) compared with FY2024, mainly through boiler replacement.

Rooftop solar capacity at Graz Electronics reached 870 kWp. Scope 2 emissions for the site were 1,340 tonnes CO2e.

The energy manager responsible for Graz Electronics is Elena Kowalski.

9. Aarhus Service Centre (Denmark)

Aarhus Service Centre reduced its energy consumption by 2,475 MWh (10.5%) compared with FY2024, mainly through furnace heat recovery.

Rooftop solar capacity at Aarhus Service Centre reached 1,290 kWp. Scope 2 emissions for the site were 12,920 tonnes CO2e.

The energy manager responsible for Aarhus Service Centre is Ida Virtanen.
